

Abstract – 29th Hans-Fischer-Symposium am 14.11.2025

Biosynthesis of Riboflavin -A journey through 50 years of research

The lecture will provide an overview of research into the biosynthesis pathway of riboflavin, focusing on the pioneering work of the research groups led by Adelbert Bacher and Robert Huber and their students, but also taking a look at current research. This topic remains fascinating today, both from a mechanistic and a structural biology perspective.
